The Innovative Staking Emulsion!

www.dexotoken.com

Introduction

DEXO was created to mark a shift from a decentralized P2P lending strategy (direct loan relationship between lenders and borrowers) to a pool-based strategy.

Lenders provide liquidity by depositing cryptocurrencies in a pooled contract.

Simultaneously, in the same contract, the pooled funds can be borrowed by placing collateral. Loans do not need to be individually matched; instead, they rely on the pooled funds as well as the amounts borrowed and their collateral. This enables instant loans with characteristics based on the state of the pool.

Holding DEXO means that you have thoroughly thought about exporting classic assets in the financial market in order to make a profit by investing your assets as effectively as possible.

Most people want to make money based on their own financial connections and resources, but that means investing a lot of personal non-financial experiences and using your energy, knowledge and time.

This is where the diversification of various resources, and the power to use many different assets of different values, and the development systems of different volatility in different financial markets play an important role. Not only diversification in assets, but also in the financial markets used, as there are many exchanges with different opportunities (which only experts like the DEXO team have access to).

Defi

decentralized finance

In the near future, every person will be able to access the services of a “bank”, regardless of what the political and/or economic climate may be in the country or region in which they live. This possibility is what has made blockchain technology and cryptocurrencies the precursors of the next industrial revolution. This constantly evolving revolution has been named decentralized finance, or DeFi.

All the functionalities of old systems are controlled by centralized authorities acting together: governments, banks, and miscellaneous financial institutions.

People deposit their money in banks and other financial institutions because they want to either:

- 1) Keep their money in a safe place
- 2) Hopefully increase savings by using the fixed financial instruments available through conventional centralized finance.

One of the main problems of centralized finance is that when someone deposits their money in a bank or other institutions, they give away control over these assets. They often have little-to-no knowledge of where their money is invested or how their money is being managed.

This lack of transparency turns individuals into nothing more than cogs in an institutionalized financial machine, where choice is limited or virtually non-existent. These centralized institutions use their customers' assets to increase their wealth by investing in different financial markets, using a variety of instruments, and by granting loans at high-interest rates. We continue to see the large profits regularly made by centralized financial institutions, but only a fraction of those profits are returned to the depositors.

DEXOTOKEN

What decentralized finance (DeFi) is, and what it offers

DeFi is a new financial ecosystem: decentralized, global, transparent, with full track records of data, without intermediaries, and which is easily accessible. Each user has total control of their assets. The goal of decentralized finance is to provide a global and transparent alternative to centralized finance for all the financial services that people use. DeFi is bringing a revolution to personal finance, and yet all that is needed is to become a part of this revolution is an internet connection and a smart-phone!

The alternatives to traditional centralized finance that this new financial ecosystem offers include: decentralized loans, decentralized swap of tokens, and a decentralized investment opportunity. These financial instruments put the power of choice back into the hands of the consumer.

Global access to financial services

Anyone can create DeFi applications (dApps), and anyone can use them. DeFi applications provide global access to financial services, the only limiting factor being the possibility of local regulation. To access DeFi token such as DEXO, users need only an internet connection and a smart-phone, regardless of their location or country.

DeFi offers users complete control over their assets. Anyone can store, trade, or invest their assets on the blockchain securely without the need for any middleman. This is possible because the role of the middleman has been taken over by smart contracts (which is available to everyone), written by developers for DeFi applications.

DEXO Vision

DEXO is a high-level solution to bridge DeFi platforms and Staking Pools when supporting the MetaVerse and NFT-Marketplaces. We believe in a future with Crypto Currency - by the people, for the people. When blockchains are powering financial networks, and all money becomes digital, it will not matter where a person lives; they will have equal access to the global economy. It will not matter what currency or assets they want to send someone; they will be able to.

Whether they sit across the table or in another country, they will be able to access a world without borders. This will be possible because, with complete control over their money, entrepreneurs everywhere will be able to create new services and overhaul existing outdated financial infrastructure. This will give birth to a truly global, digital economy that is accessible by all, with programmability at its core. We will see rapid innovation bring down prices, the same way rapid innovation came about when people got connected to the internet. Not only will the money of the future be truly digital, but it will also be programmable.

DEXOTOKEN

The key reasons for Cryptocurrency being on the brink of mass adoption are that people either don't have access to basic banking services or that they face problems with the existing banking in their market.

For example, costly FX rates, issues with savings and investments, or even just basic transaction fees. This problem differs market-to-market, and the spectrum of impact is vast.

The three types of money that currently exist are:

1. Cash: Cash is a public payment infrastructure that anyone can use to do transactions in the physical world. Cash allows for full ownership.

2. Digital Money: Digital money is the money in your bank account. Compared to cash, it is run and operated by private institutions who can decide whom they want as a customer as well as which services they want to offer to their customers.

This brings big limitations to the availability of digital money in the world. The need for digital money - the money currently held in banks, for example- is clear, but there are limitations. It does not come with ownership, as it always requires an intermediary to manage the money on the customers' behalf and this impacts day-to-day efficiency as well as potential for this type of money.

3. Cryptocurrencies or New Money: How the team solves the problem above is in core by giving people and communities full ownership and control plus keeping their money accessible at all the circumstances when the contracts they accept on different dApps approve too. With its programmable heart, it works as a means of innovation. It enables us to build a robust economy that is genuinely inclusive by being assembled on the top of borderless money.

DEXO Mission

Our mission is to transition the world from old money to crypto-currency by providing global banking services built on top of crypto. DEXO will give users the freedom of being able to access financial services that they do not have today and complete control over their assets.

DEXO Token

The DEXO coin marks the shift from a centralized lending strategy to a decentralized pool-based system. Loans do not need to be individually matched; instead, they rely on the pooled funds, the amount borrowed, and their collateral.

- ▶ DEXO's value increases by using all types of transactions, and the community-owned decentralized financial infrastructure brings more value and stability.
- ▶ DEXO is the token you earn through the excellent plans, and you can exchange it in the market.
- ▶ Your DEXO value would grow as the community grows fast worldwide.
- ▶ DEXO combines the best of both worlds: the familiar and easy-to-use tools of BSC and the scalable architecture of MMM (Money Making Machine).

DEXO Token

On its path to making everything easier for institutions and retail alike (making passive incomes and many other potentials), it supports other top solutions in the world when connecting them much easier than before.

1XD is a decentralized token under the BSC (BNB) protocol. The existential objective of a stable coin is to retain its purchasing power, and it is vital to create cryptocurrencies that track the value of local fiat currencies. 1XD is valued at 1 USD with less than a percent's fluctuation, and it was used as collateral for the decentralized investment contract.

DEXO is using a BSC-compatible smart contract.

Roadmap

DEXO is still being actively developed

Q3 2022

- Public Launch on the first decentralized exchange
- Blockchain summit participation
- Post takeoff marketing operations
- NFT marketplace final planning
- First delivery of DEXO utility
- Introduce negotiations with Metaverse platform providers
- Testing the implementation of community voting phase 1
- Final negotiations with Metaverse partners
- DEXO was added to key rating websites
- Public Launch on the second decentralized exchange
- Listing on the first centralized exchange

Q1 2023

- DEXO virtual city/marketplace live
- Open the DEXO swap
- Rental services launch in the metaverse
- To run DEXO top-tier DEX
- Launch DEXO 3D products franchise
- Blockchain meetups and summits
- Increasing the team to the final phase
- Growing international attendance & awareness
- Tactical NFT & crypto partnerships
- Announce 2024 to 2026 roadmap

Q2 2022

- Initial DEXO public announcement
- High-profile financiers invitation
- Pressure test smart contracts
- Develop a core team.
- Add staking/ bond financial menus
- Pancakeswap implementation
- DEXO staking development phase1
- Launching DEXO Super Packages
- Awareness publicizing & PR operations
- Private sale phase 1
- Public presale registration
- AMA on social media
- Pre-launch marketing promotions
- CertiK audit
- CMC first submission

Q4 2022

- Increasing team members
- Website version 2
- Digital collectible launch
- Sponsorship of blockchain & crypto events
- Explore metaverse developer partnerships
- Onboarding strategic investors for DEXO NFT marketplace
- Rising global communities
- DEXO NFT marketplace launch
- Further exchange listings
- Metaverse final planning and development
- Implementation of fiat to DEXO

Announce a 10-year plan to achieve 50M users.

The rough roadmap beyond that is to launch DEXO on the top exchanges.

Dexo!

DEXO Ecosystem

DeFi

Some of the tools that are used to carry out decentralized finance include blockchains, digital assets, decentralized applications (dApps), smart contracts (Smart Contracts), protocols, and decentralized exchanges (DEX).

The Ethereum blockchain and ecosystem has been leading decentralized finance from the beginning, with Ethereum-based projects like MakerDAO and Augur, among others. But, little by little, there are other large platforms in the sector, for example, BSC, Algorand, and Tezos, that is also getting ready to claim their share of this rapidly expanding pie.

DEXO will build the best DeFi digital banking system to optimize the profitability and distribute the profit between all investors, and supply opportunities for people who have been used to traditional banks for centuries, to receive the real value of their investment back via its tokens 1XD and DEXO.

Staking

The staking platform enables investors to earn a yield on the DEXO token by depositing the purchased token.

An Annual Percentage Yield (APR) of 480% is earned on the token's value, and staked tokens can be unlocked at the end of each rebase period. In addition to the financial return that is earned, stakers are rewarded with the governance token DEXO.

DEXOTOKEN

Dexo!
The Innovative
Staking Emulsion!

www.dexotoken.com

DeFi

In simple words, staking is the act of depositing cryptocurrencies in order to receive rewards. Decentralized loans have much higher returns than those offered by traditional market funds, even reaching 18%, compared to 2-3% in the traditional market.

DEXO is much more than just a BSC implementation: It's a highly specialized platform that helps you make money faster than ever. The platform extends the base BSC features set with additional features such as referral plans, staking, rewards pool, and many upcoming ones.

The target market for DEXO is investors who do not have time to study the increasingly complex DeFi phenomenon from scratch or those who wish to optimize their returns.

Easy: You don't need to open an account or anything, and you only need a wallet to connect to your account.

Anonymous: You don't need to provide any of your personal information.

Low fees: You use our services by fees near to zero.

Fast: Interest rates and rewards update rapidly and they are higher than Wall Street rates.

You can also advance your position in the company by inviting new partners under your unique referral links to earn much more. The amount of your partners' deposits forms a structural turnover, and depending on the amount of structural turnover, you improve your referral program and open new referral levels up to 5 levels.

Metaverse and NFT Marketplace

The Metaverse isn't a new idea. The term has circulated for decades. Virtual Reality, Augmented Reality, and 3D Computing; The technological concepts behind it can still be considered old. The current booming interest is just the most recent peak in a many years-long push to make these advances useful to everybody.

What's changed is a shift in understanding, a conviction that the internet needs to be re-imagined. An evolution of the internet which is often described as online spaces where people can socialize, work, and play as avatars. Those spaces are shared and always available; they don't disappear when you've finished using them, like a Zoom call.

Dexo!

The Innovative Staking Emulsion!

www.dexotoken.com

DEXOTOKEN

The description is so broad that many people say the Metaverse already exists. Digital neighbourhoods, parks and, clubs will spring up, possibly in a single virtual world or spread across many others. Some people see a Metaverse that overlaps with the physical world and includes AR overlays. Investors are already splashing out on plots of virtual land.

The DEXO in Metaverse will provide an open and fair economy backed by the blockchain's inherent properties of immutability and transparency. In addition, the fundamental law of supply-and-demand based on the scarcity and on-chain value of an NFT (according to its applicability) determines prices, eliminating the possibility of pumps and artificial value inflation.

NFTs will also play an integral role in identity, community, and social experiences in metaverses. Holding DEXO NFT assets will signal a users' support of a project or convey perspectives about the virtual and real world. This allows like-minded individuals holding DEXO NFTs to band into communities that share experiences and create content together.

The DEXO Metaverse will allow users to purchase land, avatars, and accessories via the DEXO NFT Marketplace. Avatars represent a players' real or imagined self. Players can use NFT avatars as access-tokens to enter and hop between different locations within the Metaverse. In this case, NFT avatars serve as an extension of our real-life identities, where we have full ownership and freedom to curate and build our virtual identities in the Metaverse.

Property Ownership: Virtual Real Estate

With DEXO Land NFTs, users can have full ownership of their virtual lands and spaces in the Metaverse. The underlying blockchain enables users to prove ownership of the assets and develop their virtual real estate as they wish.

Some uses for virtual real estate in the DEXO Metaverse include selling land for profit, renting land for passive income, building various structures like online shops on the existing land, or hosting social events.
